Psychodynamic Therapies with Infants and Parents: A Critical Review of Treatment Methods

Björn Salomonsson

Abstract: The theory of psychoanalysis has always relied on speculations about the infant's mind, but its clinical practice was slow in taking an interest in babies and their parents. The therapy methods that nevertheless have evolved during the last 50 years differ in their emphasis on support or insight, which roles they attribute to mother and baby in therapy, and to what extent they focus on the unconscious influences in mother and baby, respectively. They also differ to what extent their theories rely on classical psychoanalysis, attachment psychology, developmental psychology, and infant research. Each method also contains assumptions, most often tacit, about which kinds of samples for which they are most suited.

The article describes the most well-known modes of psychodynamic therapy with infants and parents (PTIP). There is a certain emphasis on methods that are less known to the U.S. readership, such as the French and Scandinavian traditions. It submits them and the other methods to a critical review.

From early on in the history of psychoanalysis, clinicians sought to modify its classical technique. Their aim was to reach patient categories beyond those that Freud and his contemporaries were treating. Their efforts resulted in therapy modes with a decreased frequency and duration, such as brief and focal psychotherapy. They also gave rise to techniques for psychotic and borderline patients, as well as groups and couples. One of the last patient categories to be reached by such efforts was the mother-infant dyad. Parent-infant psychotherapy was introduced on both sides of the Atlantic by Fraiberg (1980) and Dolto (1982, 1985) half a century ago. Today it is gaining increasing interest among psychoanalytic therapists. This article will review and delineate

I thank the Children's Welfare, Olle Engkvist Byggnästande, Groschinsky, Signe and Ane Gyllenberg, Kempe-Carlsson, Mayflower Charity, and Wennberg foundations, and the IFA Research Advisory Board, for generous grants.
