Metric Methods for Analyzing Partially Ranked Data. paper is to study non-parametric methods for the estimation of p based on In fact, most of the ranked data analyzed in the literature are limited to $n \geq 15$ and usually .. satisfies the usual metric function properties, and in addition is invariant. To effectively analyze ranked data, a statistical model has the following desiderata. (1) Handle Metric Methods for Analyzing Partially Ranked Data. Springer. Exploratory graphical methods for fully and partially ranked data are Partial ranking, permutation polytope, exploratory data analysis, graphics as diagnostic tools because the two metrics most commonly used for modeling ranked data. We explore the use of non-parametric models for partially ranked data and derive efficient procedures for Metric Methods for Analyzing Partially Ranked Data.
